

Terminal 117 Cleanup

Port of Seattle and City of Seattle
June 11, 2008

Notice of Upcoming Work

Bank Repair Work

Beginning **Monday, June 16**, the Port will be repairing a small eroded section of the bank at Terminal 117. This is an interim repair job and is not part of the overall site cleanup work.

The repair will involve placing approximately 20-30 cubic yards of rock to cover a small area of eroded bank along the property's shoreline. We expect the work to take about a week. All work will occur within the terminal property, behind a locked fence, and during low tides.

If passing by from Dallas Avenue or along the river, you may notice construction equipment, laborers, environmental inspectors, and construction materials. All construction materials and equipment for the repair work will be staged inside the fence at Terminal 117. The Port has agreed to work only when the tides are out, leaving the bank relatively dry. The U.S. Environmental Protection Agency (EPA) has approved the work.

For questions about the bank repair, contact Roy Kuroiwa, Port of Seattle, Seaport Environmental Department, 206-728-3814 or email at Kuroiwa.r@portseattle.org.

Terminal 117 Cleanup Planning

The Port and the City of Seattle are continuing their work developing an expanded cleanup plan to address the T-117 sediments, bank, upland area of the terminal, and City Street rights-of-way in the vicinity of the terminal, as part of the lower Duwamish River Superfund cleanup. For information about the cleanup plan visit the Port's public web site at www.T117.com.
